Abstract

This is a working template for the research paper to be presented at the IOE Graduate Conference - 2016. The template has been typeset in \LaTeX . You have to replace certain sections of this template by your content and produce a pdf file as final output. Format for different types of elements that could occur in the paper are already defined in this template. The authors are to strictly follow the style/formatting as defined in this template for consistencies in a single paper and across different papers. The contents of the paper appears in a two column format, with an exception of the paper title, author names and affiliations, and abstract and keywords. Abstract should not exceed 300 words. Each of the keywords need to be separated by – as given in the example below.

Keywords

IOE Graduate Conference – \LaTeX – Template

Introduction

In the past, the papers for IOE Graduate Conference were submitted as Microsoft Word document. Although standard templates were created for the submission, there used to be a lot of technical problems in the submitted documents. Only a few papers seemed to follow proper guidelines. This resulted in difficulty in compiling the final conference proceeding. To overcome this, the conference committee has decided to use \LaTeX as the standard and only tool for preparing the paper to be presented at the IOE Graduate Conference starting from the year 2015. In word processing softwares like Microsoft Word, it is very likely that people create unorganized document, whereas in typesetting software environment like \LaTeX , one has to create a document in an organized fashion.

On the other hand, \LaTeX is being adapted as the standard tool for producing technical documents by most of the top class universities and publication houses. This means that if the graduate students do not learn \LaTeX at the right time, they will poise some limitations on themselves. So, it should be taken as an opportunity to learn \LaTeX . A lot of resources for learning \LaTeX can be found online. It would take 10–20 hours of learning

for getting started with \LaTeX and would be beneficial for life long.

1. What is \LaTeX ?

\LaTeX is a document preparation system for the \TeX typesetting program. It offers programmable desktop publishing features and extensive facilities for automating most aspects of typesetting and desktop publishing, including numbering and cross-referencing, tables and figures, page layout, bibliographies, and much more.

- A family of programs designed to produce publication-quality typeset documents.
- Particularly good at working with mathematical symbols.
- WYSIWYM¹ rather than WYSIWYG².

The history of LaTeX begins with a program called \TeX . In 1978, a computer scientist by the name of **Donald Knuth** grew frustrated with the mistakes that his publishers made in typesetting his work. He decided to

¹What You See Is What You Mean

²What You See Is What You Get

create a typesetting program that everyone could easily use to typeset documents, particularly those that include formulae, and made it freely available.

Knuth's product is an immensely powerful program, but one that does focus very much on small details. A mathematician and computer scientist by the name of Leslie Lamport wrote a variant of T_EX called L^AT_EX that focuses on document structure rather than such details.

2. Getting the L^AT_EX Software

There are two major standard distributions of L^AT_EX:

- TeXLive
- MikTeX

These are freely downloadable from the internet. TeXLive works in all the major PC platforms like Windows, Unix, Linux, and Mac. Whereas, MikTeX is for Windows only. When you install these, you also get the TeXWorks editor as your frontend. More than a dozen other frontend GUIs are available for L^AT_EX. Some of these are:

- TeXMaker
- TeXnic Center
- WinTeX
- ...

3. Template Structure

This L^AT_EX template resides on a folder with the following files/folder:

example.tex L^AT_EX source file of this document. Example on using the template with some description.

article.tex Similar to example.tex, but with very minimal content (almost blank).

IOEGC2015.cls L^AT_EX class file for making the styles and formats of the document. Prohibited to edit.

refs.bib File containing the bibliography database in BibTeX format.

Graphics Folder for keeping all the graphics files used in the document.

example.pdf Produced by compiling example.tex.

article.pdf Will be produced when article.tex is compiled.

4. Sections

L^AT_EX supports section headings upto 3 levels via the commands section, subsection, and subsubsection. These have been used in this document in section 8.

5. Placing Figures

One can generate technical graphs or diagrams from L^AT_EX also, but this requires another level of expertise. So, it is very common to include figures generated from other sources or programs. Here are a few examples on placing figures with proper captioning and label for cross referencing. The most suitable format for figure files to produce final output as pdf are:

1. PNG
2. PDF
3. JPEG

Figure 1: In-text Picture

Figure 1 takes the width of a column and Figure 2 takes the width of the entire width of the page.

6. Creating Tables

Table 1 is an example of a simple table in L^AT_EX. To create complex tables, please refer to L^AT_EX manuals or online resources.

Figure 2: Placing a wide picture

Table 1: A simple table

SN	Department	Capacity
1	Civil	192
2	Architecture	48
3	Electrical	48
4	Electrtronics	48
5	Computer	48
6	Mechanical	48
	Total	432

Here, a , b , and c are constants/coefficients and x is a variable.

Numbered equation:

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \tag{1}$$

Equation without a number

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

7. Mathematics

\LaTeX has very rich features for typesetting mathematics. Please refer to \LaTeX manuals or online resources for further information. Here are a few examples.

The formula given in equation 1 can be used to determine the roots of a quadratic equation of the form:

$$ax^2 + bx + c = 0$$

8. Lists

8.1 Simple Lists

Simple Bulleted and Numbered lists have already been presented in Sections 2 and 5 respectively.

8.2 Nested Lists

Lists can be nested upto three levels in \LaTeX .

8.2.1 Numbered Nested List

Here is a nested numbered list:

1. Fruits
 - (a) Apple
 - (b) Orange
2. Vegetables
 - (a) Spinach
 - (b) Carrot

8.2.2 Bulleted Nested List

Here is a nested bulleted list:

- Fruits
 - Apple
 - Orange
- Vegetables
 - Spinach
 - Carrot

8.2.3 Mixed Nested List

Here is a mixed nested list:

1. Fruits
 - Apple
 - Orange
2. Vegetables
 - Spinach
 - Carrot

8.3 Description List

This is for dictionary-like word and description list.

Word Definition ...

Concept Explanation ...

Idea Text ...

9. Paragraphs with heading

Hello Place your paragraph heading inside the curly braces and your paragraph text here.

Welcome The paragraph heading will look distinct than the normal text.

10. Referencing

The list of references should be produced using BibTeX. The BibTeX entries should be placed in the "refs.bib" file. Please refer BibTeX manuals or online resources on creating bibliography databases using BibTeX and citation. You can easily create bibliography database files using the GUIs like TeXMaker or JabRef.

Examples: This is citation one[1] and this is another[2].

11. Compilation

Since, this template contains a small table of contents and the reference list is generated using BibTeX, the L^AT_EX source file should be processed four times in the following sequence to generate the final pdf output.

1. PDFL_{at}ex
2. BibTeX
3. PDFL_{at}ex
4. PDFL_{at}ex

12. Submission

Before submitting the paper, the source file must be compiled without any errors. The files that need to be submitted are article.tex, refs.bib, article.pdf, and IOEGC2015.cls along with the Graphics folder. All these should be placed in a folder, compressed/zipped and uploaded or sent via email for submission.

13. Review

Your paper will be reviewed by expert(s) before the conference. Comments may be provided in the submitted pdf file. You have to recompile your L^AT_EX source file as described in section 11 and resubmit as described in section 12.

Acknowledgments

The authors are grateful to Center of Applied Research and Development (CARD) for this wonderful opportunity.
